Introduction

Moxa's CB-602I CAN (Controller Area Network) interface boards support the PC/104-Plus interface. Optional DB9 and DB25 connection cables are available for connecting to CAN interface devices. The CB-602I CAN interface boards use the NXP SJA1000 and PCA82C251 transceiver, which provide bus arbitration and error detection. The -40 to 85°C wide operating temperature (CB-602I-T only) and 2 kV isolation make the boards suitable for use in harsh industrial environments.

Introduction

Moxa's CP-602E-I CAN (Controller Area Network) interface board supports the PCI Express interface. As a standalone CAN controller, the CP-602E-I is a cost-effective solution that provides two active CAN controllers with a DB9 connector on the same board. The CP-602E-I CAN interface board uses the NXP SJA1000 and transceiver PCA82C251, which provide bus arbitration and error detection. The -40 to 85°C wide operating temperature (CP-602E-I-T only) and 2 kV isolation make the boards suitable for use in harsh industrial environments.
